Maritime mothers new tracking system

Maritime Cargo Services (MCS) has created the Mother of All Tracking Systems (MOATS).

Its cheekily titled "one-stop shop solution" is designed to encompass all of the customer's relevant shipping information and is provided to MCS clients free of charge.

The team at MCS inputs all the relevant data – including container numbers, vessel, port and cargo details, ETS, ETA and delivery depots, dates and times and free-time agreements – and carefully monitors changes on a daily basis.

Any adjustments are immediately filtered into a log book and instantly available online to the client.

The programme aims to be a fast, flexible and multi-faceted online system supplying real-time information safely and securely.

MCS managing director and founder Rob Shelley said: "We continue to invest not just in the best people in the business but in order to meet and exceed client expectations, we continue to invest heavily in the development of our own bespoke, state-of-the-art technology. For instance, we have just launched our new company website and one of the key components of the new site is the fact that our clients can now manage all of their freight management and tracking issues quickly and simply online through the site."
